Board of Trustees Meeting of October 21, 2019 Underwriting Report

The Underwriting Department staff have been attending the fall sub-fund meetings and speaking with our member districts and brokers throughout the state.

Underwriting is working with the IT department staff to coordinate the automated dissemination of hazardous condition information reported by the Safety & Risk Control staff to the Claims Department staff. This will be accomplished via the export of property inspection-related underwriting notes (created by the underwriters during renewal season) from the NavRisk underwriting database to the Origami claims database. The goal is for all three departments to work together more seamlessly in identifying and preventing property and bodily injury losses caused by known dangerous conditions.

Underwriting is working with Safety & Risk Control staff to establish a more frequent (annual) vacant building inspection program so both departments can stay on top of working with the members to minimize the liability and property damage exposures inherent in unoccupied locations.

The entire Underwriting Department is meeting monthly to brainstorm for new ways to improve the various departmental processes to better serve our members and brokers.

Claire A. King, J.D., AIC
Underwriting Manager
