Board of Trustees Meeting of May 20, 2020 IT Report

COVID-19

When the IT department was presented with the challenge of setting up all NJSIG staff to work from home, the IT staff responded swiftly. All staff was setup and able to work from home within a very short period of time. The IT department managed distributing incoming network traffic and made adjustments to the network to increase bandwidth and connectivity speeds. All employees are able to work from home at this time.

PeopleSoft upgrade

In upgrading NJSIG Windows servers from 2008 to 2016, it was discovered that the current version of PeopleTools was not compatible with the new Windows server 2016. Therefore, in order to make them work together, NJSIG will retain a Peoplesoft consultant to assist with the upgrade due to the complexity of the program.

NJSIG's Continuity Plan

The IT department moved forward with adding cloud storage for maintaining additional copies of NJSIG backup files. This will provide an additional layer of backup and confidence to the current continuity plan.

Quarterly Loss Runs

The quarterly loss runs were emailed to the brokers and mailed out to the members.
